

SOFTWARE REQUIREMENT SPECIFICATION

FOR IRO: ISSUES REPORTING OUTLET

Prepared By: Emmanuel Lawrence

Course Code: CSC426

Project Title: IRO — Issues Reporting Outlet

Supervisor: Dr. O. O. Ajayi

1. Introduction

1.1 Purpose

This document explains the basic requirements for the proposed system called **IRO**, which means **Issues Reporting Outlet**. The system is designed to help AAUA students and Akungba community indigenes report issues affecting them in the school and community environment.

1.2 Scope

IRO is a mini web-based system that allows users to report issues such as poor road conditions, security problems, water supply issues, electricity problems, environmental sanitation issues, and other related complaints. The system also allows an administrator to view reports and update their status.

1.3 Aim of the System

The aim of the system is to provide a simple platform where students and indigenes can report issues faster instead of relying only on manual reporting methods.

2. System Overview

The IRO system will have three main users:

1. **Student**
2. **Indigene**
3. **Administrator**

Students and indigenes can submit issues through the web interface, while the administrator can view submitted reports and manage them.

3. Functional Requirements

The system should be able to perform the following functions:

1. The system shall allow users to register.
2. The system shall allow users to login.
3. The system shall allow students and indigenes to submit issues.
4. The system shall allow users to select the category of issue.
5. The system shall allow users to describe the issue.
6. The system shall allow users to upload evidence where necessary.
7. The system shall allow users to view the status of their report.
8. The system shall allow the administrator to view all submitted reports.
9. The system shall allow the administrator to update report status.
10. The system shall allow the administrator to manage users.

4. Non-Functional Requirements

4.1 Usability

The system should be easy to use, even for users with little computer knowledge.

4.2 Performance

The system should respond quickly when a user submits a report.

4.3 Security

The system should protect user information. Only the administrator should be allowed to manage submitted reports.

4.4 Reliability

The system should be available whenever users need to report issues.

4.5 Maintainability

The system should be easy to update or improve in the future.

5. User Requirements

Student

A student should be able to:

- Register
- Login
- Submit issue
- Upload evidence
- View report status
- Edit profile

Indigene

An indigene should be able to:

- Register
- Login
- Submit issue
- Upload evidence
- View report status
- Edit profile

Administrator

The administrator should be able to:

- Login
- View reports
- Update report status
- Generate reports
- Manage users

6. Hardware Requirements

The following hardware may be needed:

- Laptop or desktop computer
- Smartphone
- Internet connection

7. Software Requirements

The following software may be needed:

- Web browser
- Visual Studio Code
- GitHub
- Draw.io
- Google Forms

8. System Modules

8.1 User Module

This module handles user registration, login, and profile management.

8.2 Issue Reporting Module

This module allows students and indigenes to submit complaints or issues.

8.3 Admin Module

This module allows the administrator to view reports, update status, and manage users.

8.4 Report Status Module

This module allows users to know whether their submitted issue is pending, in progress, or resolved.

9. Object Listing

Object	Description
User	A person using the system
Student	AAUA student reporting an issue
Indigene	Community member reporting an issue
Administrator	Person managing the system
Issue Report	Complaint submitted by a user

Category	Type of issue reported
Status	Current state of the report
Evidence	Uploaded image or file
Report List	Collection of submitted reports

10. Assumptions

The system is based on the following assumptions:

1. Users have access to a phone or computer.
2. Users have basic internet access.
3. Users will provide correct information.
4. The administrator will attend to reported issues.

11. Limitations

1. The system is a mini project.
2. The current version does not use a full database.
3. Advanced security features are not fully implemented.
4. The system is mainly for academic demonstration.

12. Conclusion

IRO is designed to make issue reporting easier for AAUA students and Akungba community indigenes. The system will reduce the stress of manual reporting and help administrators receive and manage complaints in a better way. The project includes a questionnaire, Ishikawa diagram, use-case diagram, mini web interface, and documentation as required for the CSC426 assignment.
